

# Tru-flo Butterfly Valves

## Old Style vs New Style

### NEW STYLE

- "Tru-flo" is Laser etched on the internal of the flanges in the direction of Tri clamp
- "Half moon" notch inside the lower squeeze lever for manual valves. (This is designed for elongated lock)
- Seal has a step in the design that allows for use in Vacuum applications
- Black plug in the bottom

### OLD STYLE

- "Tru-flo" is Laser etched on the bottom edge where the flanges meet
- Smooth handle with no notch
- Flat seals with no indentation
- Blue plug in the bottom

If actuated, the new style and old style use different brackets and cannot be interchanged. The actuator will continue to work on both styles.
