

Certified Repair Centers

FOOD AND BEVERAGE PRODUCTS

Our certified distributor network provides quick maintenance turnaround on positive displacement pumps and single and double seat valves.

The Certified Service and Repair Center program is designed to ensure that all repair work completed on-site meets the same standards that are in place at all of our manufacturing facilities. Distributors with certified status are required to complete rigorous program requirements, including:

- Passage of in-depth, hands-on product training led by SPX FLOW technical product experts
- Purchase of specialty tools required for maintenance procedures
- Managed inventory levels of spare parts to ensure quick turn-around times
- Completion of annual audit to verify proper inventory, equipment, and quality procedures are in place.

Finally, the certification requirements must be completed every three years and all personnel must be retrained and retested to the latest service and repair procedures.

Certified Repair Centers provide significant benefits to local pump and valve operators:

- Reduced cost of product ownership
- Minimized shipping expenses
- Increased product uptime
- Expedited warranty process
- Reduced lead time for repairs and parts

The SPX FLOW Factory Certified Service & Repair Center program brings service experts closer to the customer for more efficient, effective customer support.
